

Close Collaboration with Customers

Barneveld, The Netherlands - October 2026

moba.net

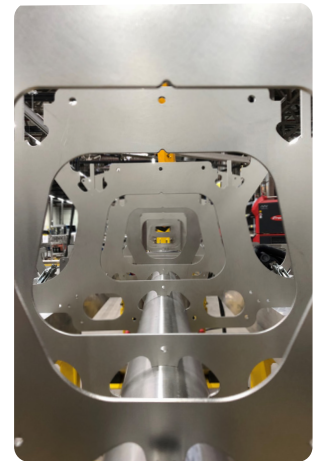

Moba continued to make solid progress in the third quarter of 2026, supported by a strong demand, targeted investments in operational efficiency and innovation, and close collaboration with customers.

Solid Demand Supports Continued Investment

Customers continued to invest in automation, productivity, and food safety solutions during the third quarter of 2026, confirming steady demand throughout the year to date. Although order intake normalized from the exceptional levels recorded last year, Moba maintains a promising order book, providing a strong basis for continued activity. Revenue developed strongly, and based on current expectations, 2026 is expected to close above the 2025 level, reflecting another good year for Moba. Against this backdrop, Moba continued to professionalize its internal processes, creating a stronger foundation for its customer-focused investments.

During the quarter, further improvements were made to line assembly, logistics, and supply chain processes. These changes are intended to support faster, more predictable delivery and a more responsive service as customer needs evolve. Improvements in spare parts availability, service processes, and feedback resolution can also help customers limit downtime, maintain reliable system performance, and operate more efficiently over the longer term.

Customer input plays a central role in guiding Moba's continued investment. Through its advisory boards, Moba stays connected to developments across the market and gains valuable insight into emerging challenges and future needs in the egg industry. This input helps shape innovation and long-term priorities, enabling Moba to develop solutions that support customers' sustainable profitability.

A Proud Thank-You from J.S. West to Moba

J.S. West recognizes the full potential of its new Moba PX+530, which is operating at full production and meeting every benchmark for accuracy, throughput, and reliability. In a LinkedIn post, John Bedell, VP Ag Operations, praised Moba's clear communication, disciplined scheduling, responsiveness, and follow-through during the complex plant remodel, delivered without disrupting daily production.

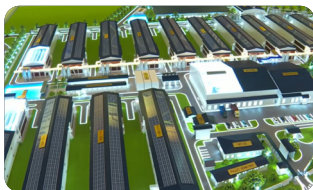

Moba Italia Doubles Production Capacity for Egg Breaking and Processing

Moba Italia has launched a strategic expansion of its facility in Brugherio, Italy, doubling production capacity for egg breaking and processing equipment after five years of sustained growth and rising market demand. By integrating newly acquired factory space into one facility, Moba Italia will improve efficiency and support continued international growth. The expansion also strengthens Moba's capabilities across the egg processing value chain. "This expansion recognizes Moba Italia's success and its role in our global strategy," says Edwin Bolwerk, CEO.

Turning Machine Data into Operational Insights

Moba maintains a continuous focus on helping customers make their operations more efficient. This now also includes advanced research into how machine data can provide users with greater insight and help them improve operational efficiency. By turning data from connected equipment into practical insights, this work may support better-informed decisions, improved process control, and more effective use of resources. The aim is to make solutions accessible through the myMoba digital portal that provides egg producers with greater operational visibility and control, creating lasting value. The rollout of the myMoba platform is scheduled to begin in late 2026, introducing a new way for customers to do business with Moba. Looking ahead, Moba will continue to develop technologies that enhance efficiency, contribute to more sustainable production, and help egg businesses worldwide succeed over the long term.

A Groundbreaking Event for DoMo Farm in Singapore

DoMo Farm has unveiled plans for its fourth egg farm, marking a major step forward for egg production in Singapore. Moba Vision Technology for crack detection and weighing will help the company improve precision, efficiency, and food safety.
